

Northern Hybrid Lilies

Lilium x

NEW NORTHERN ORIENPET HYBRIDS

Jeffries Nurseries Ltd. is pleased to announce the addition of two new orienpet lilies to their original "Northern" orienpet collection.

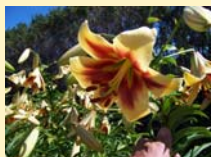

Released for the first time in 2008, two new cultivars, "Northern Dazzle" and "Northern Delight" will add new color and shape to the original red/white collection. These two cultivars are the result of work by well known hybridizer Dr. Robert A. Griesbach of Delavan, Wisconsin. These two cultivars were personally selected by Dr. W.G. Ronald of Jeffries Nurseries Ltd. and extensively tested in his Manitoba growing fields. They have proved to be hardy, vigorous and disease resistant in zone 3.

Northern Dazzle R. Griesbach

This new generation OT is a welcome bi-color addition to the family. Originally designated R 76, it features a red center with yellow margins and the green nectaries of the OT family. The 6 inch bloom is side facing with 6 to 10 + blooms per stem. The stems are strong and average 1.3 m in height. It blooms late July/ early August. It does not have a strong perfume. It produces large bulbs by the second year.

Northern Delight R. Griesbach

This is another Griesbach original, originally designated R 276. The yellow flowers with green nectaries are large, 8 inches across, sidefacing with a more classic trumpet form. This lily can have up to 20 blooms borne on strong 1.3 m stems. It blooms late July / early August. It does not have a strong fragrance. The bulbs are fast growers with good bulblet production.
