Often described as a hardy Hybrid Tea rose, Canada Blooms produces fragrant flowers with over 40 petals. The bloom color is pink and the growth habit produces strong long stem roses ready to be presented to a loved one. The dark-green foliage is moderately resistant to diseases. A sheltered location in the garden combined with additional mulch in the fall and some lasting snow cover should guarantee winter survival in zones 2 and 3.

**TIPS FOR GROWING ROSES**

- A rose should be planted in a well-aerated, sunny location that receives at least 6 hours of sunlight each day.
- Roses can be fertilized on a monthly basis until early August and watered once per week, preferably in the morning.
- Watering roses at soil level, under the foliage, reduces leaf wetness and limits disease development.
- Removal of spent flowers and fruit will promote the development of new rose buds.
